

Component & Interaction Library

A restrained operating grammar for strategic judgment, retained context and governed execution.

BEHAVIOR / COMPONENTS / MOTION / RESPONSIVE / ACCESSIBILITY

Intelligence is felt through behavior.

The site earns modernity when context changes, permissions remain legible and every transition resolves — not when every heading receives an icon.

The image system carries the world. The component system makes that world usable.

■ World

Decision Field supplies warmth, strategic ambiguity and human judgment.

■ Instrument

Operational Evidence makes WorkGraph, Factory, boundaries and proof inspectable.

■ Transition

Machine Signal shows one causal resolution, then stops.

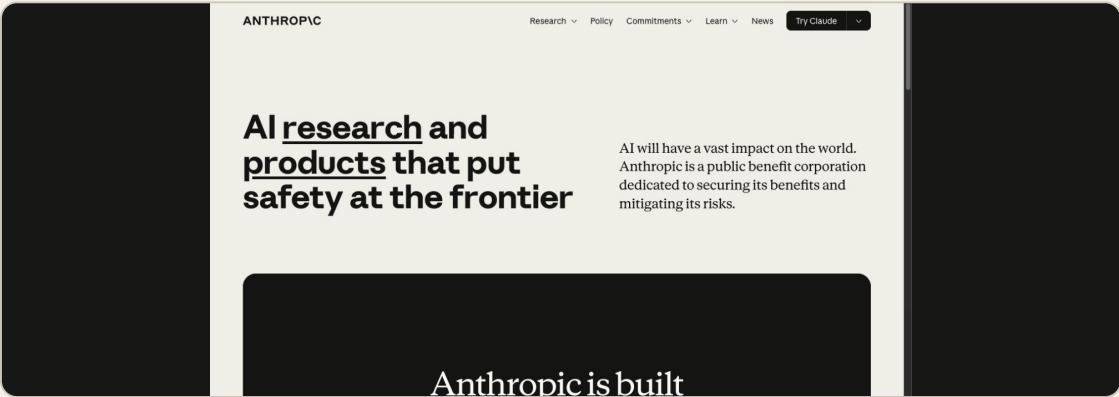

BINDING RULE

**Pictures explain the idea.
Components expose the
mechanism. Icons only clarify an
action or a durable product
concept.**

No icon walls. No decorative dashboards. No terminal theatre.

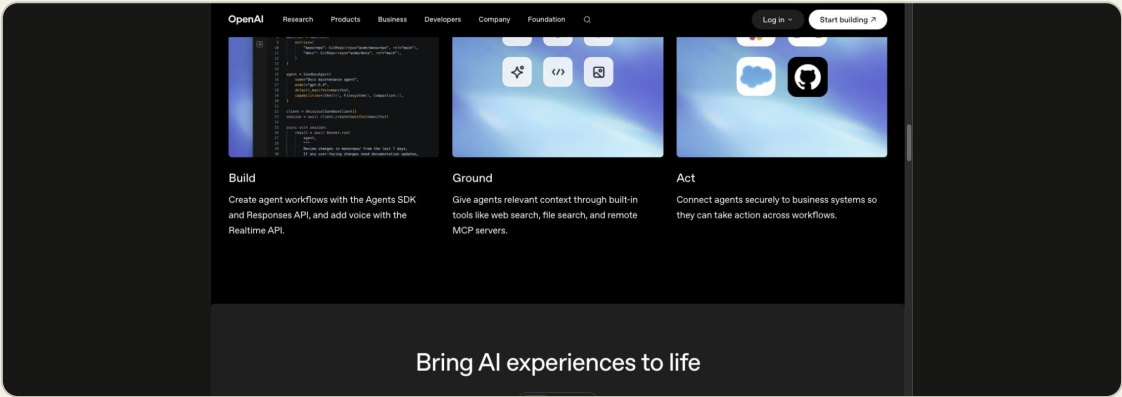

Four references point to restraint, not abundance.

Official pages were inspected beside the Dagg specimen. Identity comes from composition and stateful behavior; icon density remains low.

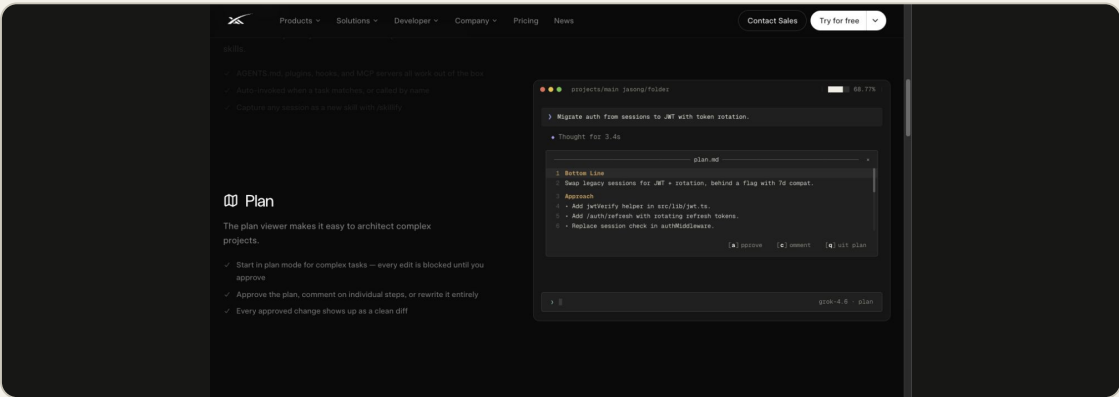

Anthropic

Typography and material world

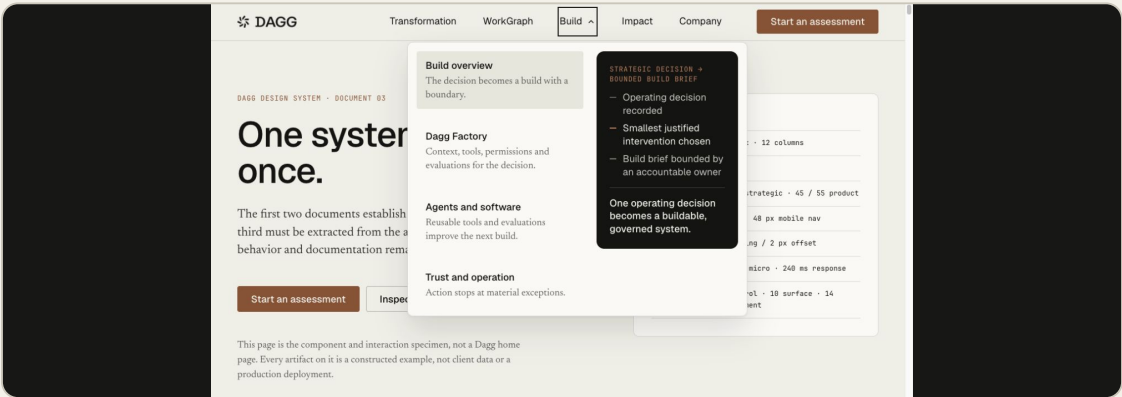

OpenAI

Product icons inside a mechanism

xAI

Sparse own marks beside evidence

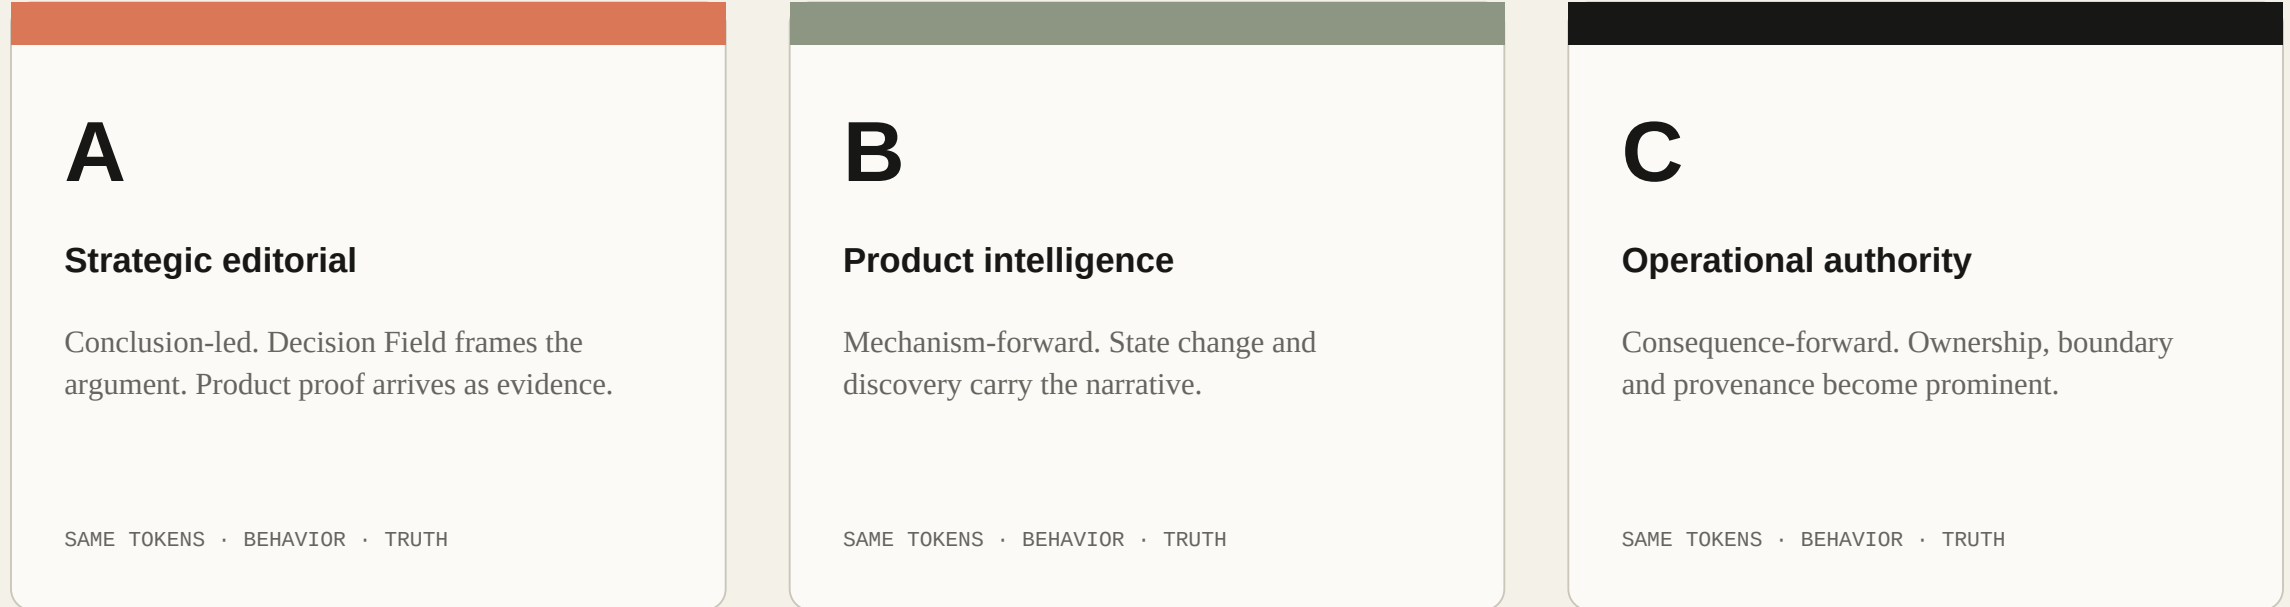

Dagg

Adaptive nav with governed proof

One substrate. Three visual directions.

A, B and C vary rhythm, proof order and narrative emphasis. Navigation, controls, states and accessibility do not fork.

The director selects one coherent direction. The final site never becomes a compromise collage of all three.

A library is not a usage quota.

The internal collection supports product UI and presentations. The public site uses only what helps a reader act or understand one durable concept.

0

Hero icons

The thesis is carried by copy, imagery and motion — never an icon row.

1–2

Icons per instrument

Only when they clarify state, ownership, boundary or evidence.

8

Semantic concepts

Decision, context, boundary, build, verification, evidence, ownership and way back.

Two layers

Utility

Menu, close, disclosure, external destination and playback use familiar licensed symbols.

Semantic

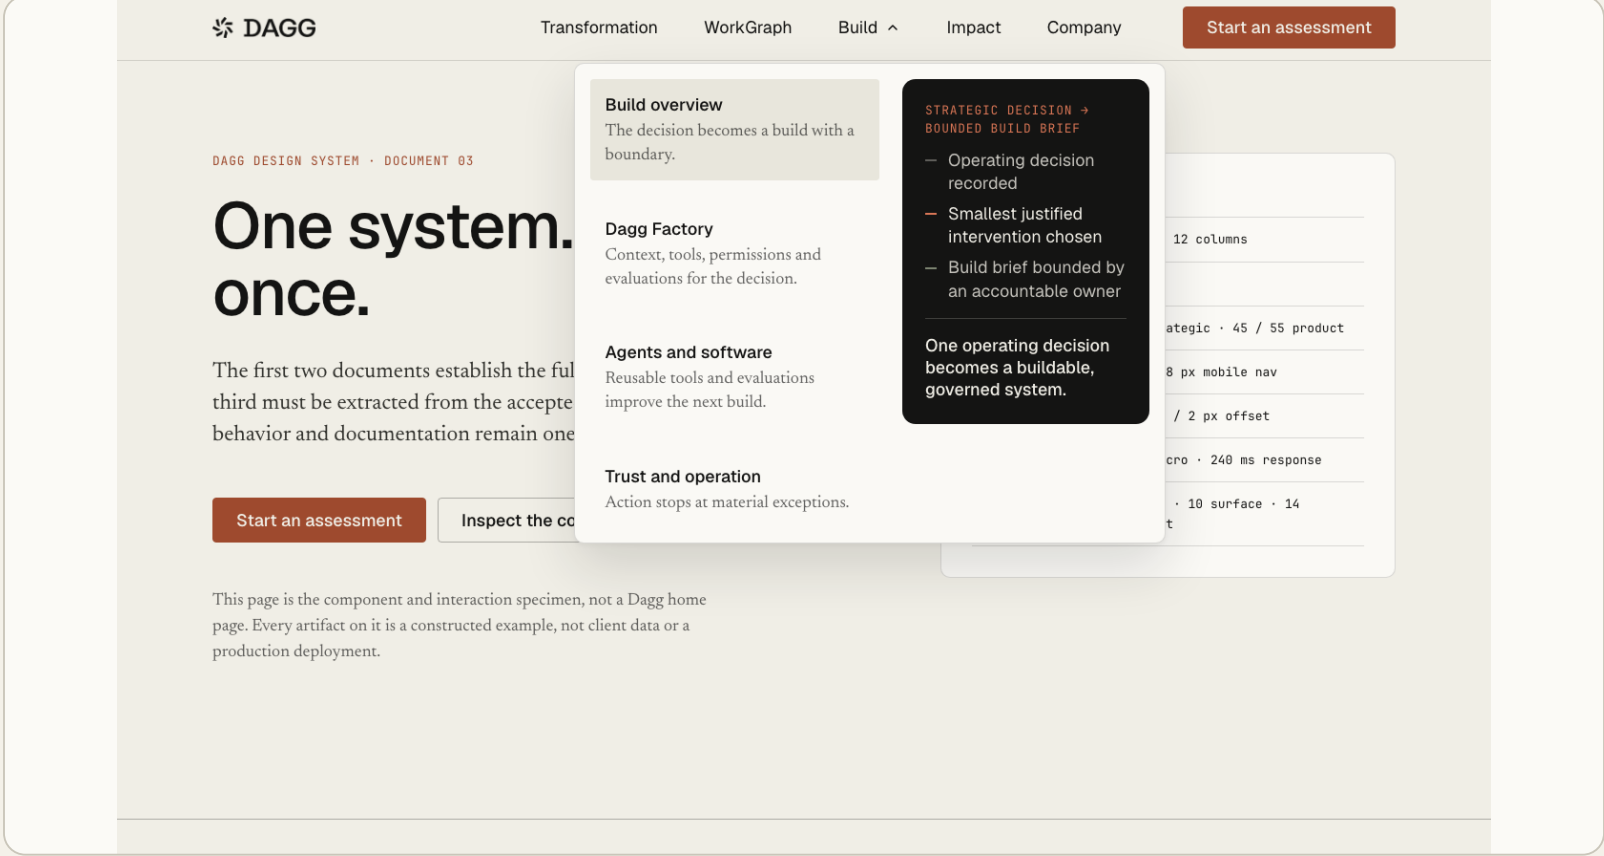

Dagg owns the concept mapping, carrier, tone and motion grammar; the pictogram remains replaceable.

PUBLIC-SITE RESTRAINT

No icon before every headline. No capability-card constellation. No icon as a substitute for product proof.

Adaptive navigation previews intent.

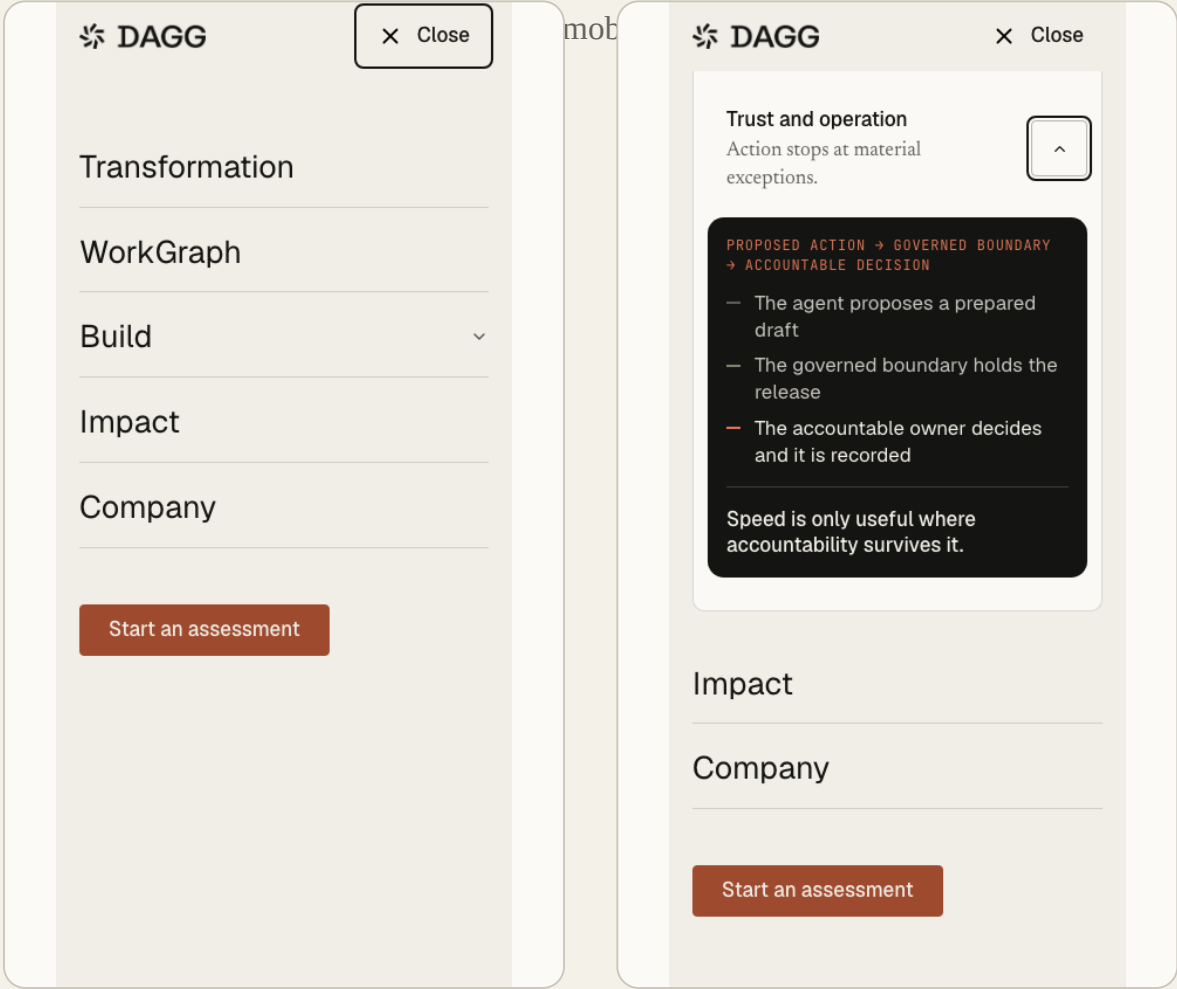

The menu remains navigation. A single proof inset changes with the destination and carries context into the next page.

STATE CONTRACT

- Open**
70–100 ms intent; 180–240 ms close grace.
- Preview**
Four destinations change one inset; the panel stays stable.
- Carry**
Selected context continues into the destination.
- Fallback**
Every destination is a real link. Touch uses disclosure.

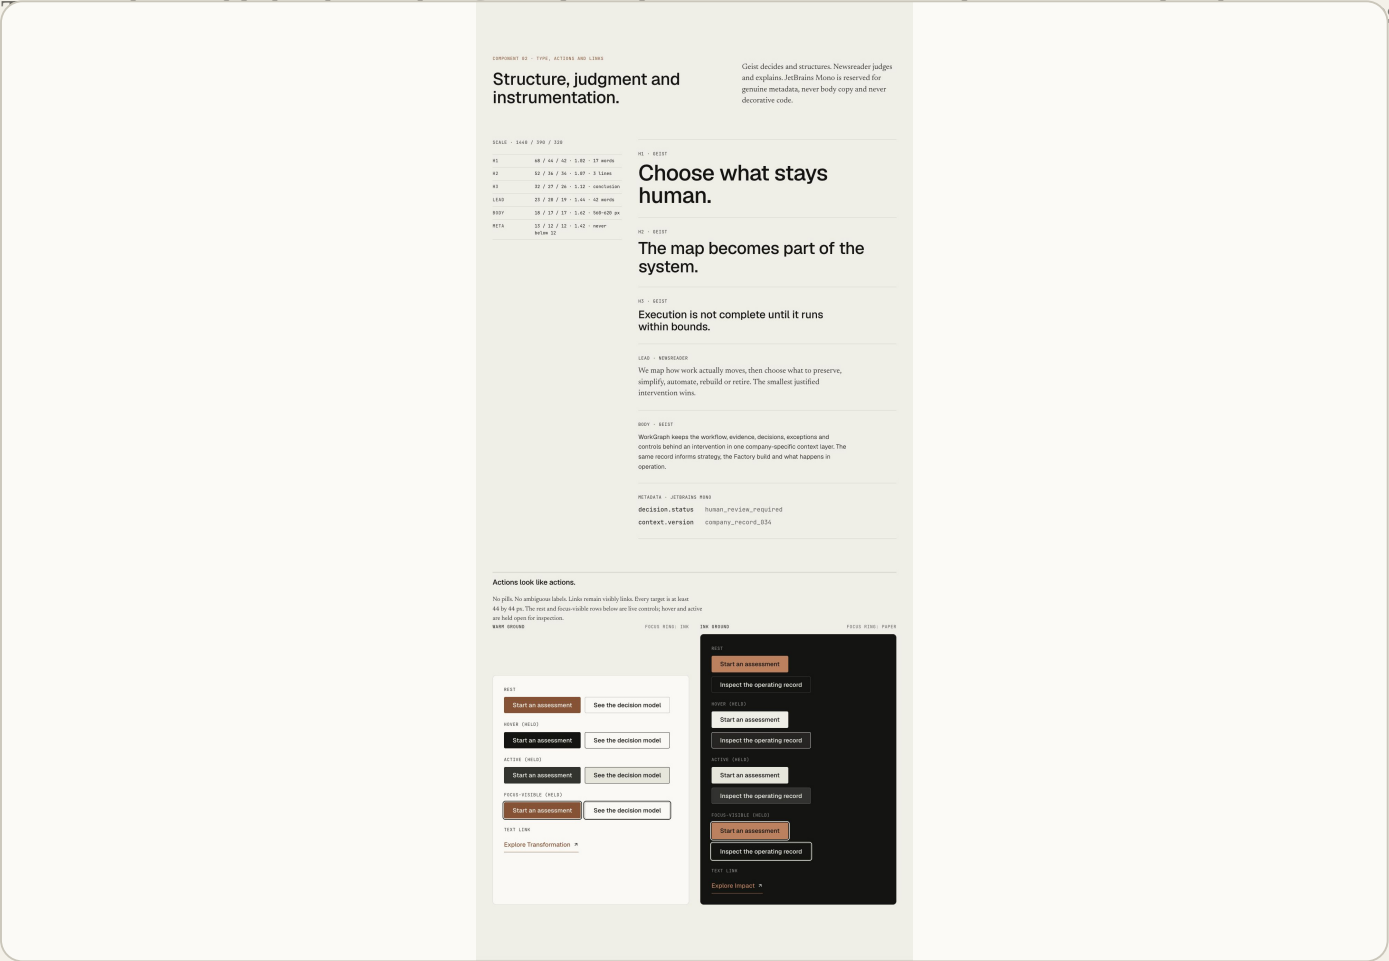

Desktop, tablet and mobile are authored modes.

BINDING BEHAVIOR

- Desktop**
Pointer and keyboard expose the same proof states.
- Tablet landscape**
Pointer plus touch; flyout remains bounded.
- Tablet portrait**
Touch-first disclosure and editorial reflow.
- Mobile**
Full-canvas navigation, focus containment and body lock.
- All modes**
No critical meaning depends on hover or animation.

Actions look like actions.

CONTROL FLOOR

44 px target · 48 px mobile navigation · 2 px visible focus ring · no pill theatre

The decision appears before the technology.

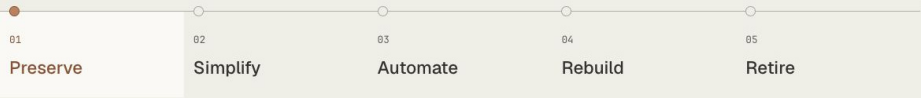

COMPONENT 05 · STRATEGIC DECISION

The first decision is what not to automate.

We map how work actually moves, then choose what to preserve, simplify, automate, rebuild or retire. The smallest justified intervention wins.

FIVE OUTCOMES, FROM KEEPING THE WORK TO STOPPING IT
KEEP THE WORK

STOP THE WORK

Keep the work as it is.

- CHOOSE WHEN
- The work is proportionate to its value, and human judgment is essential.
- DO NOT CHOOSE WHEN
- Delay, rework or unclear ownership is quietly compounding.

● PROOF MARKER: HUMAN JUDGMENT REMAINS THE VALUE.

A recommendation is not complete until it names an owner and the evidence that would change it.

One retained WorkGraph record.

Sources can change while work, decision, owner, boundary and evidence remain part of the same company-specific context.

PERSISTENT INVARIANTS

- **Context**
The company-specific record remains the source of working truth.
- **Decision**
A material judgment stays attached to the work it changed.
- **Boundary**
Authority and accountable ownership remain explicit.
- **Evidence**
The next intervention begins with retained learning.

COMPONENT 06 · WORKGRAPH RECORD

The map becomes part of the system.

WorkGraph keeps the workflow, evidence, decisions, exceptions and controls behind an intervention in one company-specific context layer.

ONE RETAINED RECORD

Supplier payment exception

REPRESENTATIVE WORKGRAPH RECORD · SYNTHETIC DATA

APPROVED SOURCES

Meetings

Messages

Documents

Systems

SOURCE

Weekly operations review

CAPTURED STATE

Invoice and receipt disagree; release is awaiting review.

EVIDENCE

Review note linked to the purchase order and the invoice

RETAINED · UNCHANGED BY SOURCE

WORK

Payment exception: resolve the mismatch before release

DECISION

Automate preparation; preserve human approval for release

OWNER

Finance owner

BOUNDARY

The agent prepares; only the Finance owner releases

Retained context makes the next record clearer.
Decision Field context carrier - smaller than the record it explains.

Finite Factory progression.

Requirement resolves through decision, architecture, build, evaluation and review — with judgment and verification held visibly.

THE PASS

- Finite

One 6–8 second pass, then an inspectable resolved state.
- Judgment hold

The product decision is visible before the machine continues.
- Verification hold

Evaluation can withhold release and route the exception.
- Way back

Disable, remove the draft and return to the manual queue.

One 6–8 second pass. It holds at judgment and at verification, then stops in an inspectable resolved state. Under reduced motion the same end state appears immediately.

PASS	7.2 s · one only
HOLDS	Product decision · Evaluation
CONTROLS	Pause motion · Replay
NO JAVASCRIPT	All six stages readable, no controls
PROVENANCE	Illustrative Factory build plan

Illustrative Factory build plan · not a client deployment.

FACTORY BUILD RECORD

Prepare the payment draft.
Preserve human approval for release.

⏸ PAUSE MOTION

⏮ REPLAY

01 Requirement

Prepare the payment draft from approved sources; keep release with a person.

02 Product decision

HOLD · JUDGMENT

Automate preparation; preserve human approval for release.

03 Architecture

Approved finance-system read and payment-draft tool. Prepare only; never release.

04 Build

The purchase order, goods receipt, invoice and payment policy become the working context.

05 Evaluation

HOLD · VERIFICATION

When source records disagree, the draft is withheld and the exception is routed to the Finance owner.

06 Review

Release owner: Finance owner. Way back: disable the agent, remove the draft, return the item to the manual queue.

RESOLVED STATE

Requirement linked to the company record

One capability. Two surfaces.

The interface changes. The customer harness, permissions, accountable owner and retained record do not.

WHAT MUST CHANGE TOGETHER

Context

The request resolves against approved company context.

Action

The same capability can prepare, explain or execute.

Permission

No external write or commitment without accountable approval.

Evidence

The result returns to the same retained record.

COMPONENT 08 · ONE CAPABILITY, TWO SURFACES

Al-native changes how the company works — and how customers work with it.

Inside the company, agents carry stable execution while people direct, decide and verify. Outside it, the same governed capability can meet customers wherever they work.

Inside the companyAt the customer surfaceILLUSTRATIVE CAPABILITY · SYNTHETIC DATA · NOT A CLIENT DEPLOYMENT

INSIDE THE COMPANY · BOUNDED EXECUTION

CONTEXT	The company record and the approved sources behind it
CONNECTION	Governed agents run inside WorkGraph and Factory.
AUTHORITY	The client system remains the source of truth.
ACTION	Prepare the draft from approved sources; withhold release.
BOUNDARY	Material exceptions stop and wait for an accountable owner.
EVIDENCE	Decision, permission check and owner return to the same record.

TRIGGER

AGENT PROPOSALHUMAN CHECKPOINTBOUNDED ACTIONRECORDED EVIDENCE

PERSISTENT COMPANY RECORD

Supplier payment exception

WORK	Resolve the mismatch before release
OWNER	Finance owner
PERMISSION	Prepare only; never release
STATE	Withheld from release

Unchanged by surface: context, permissions and accountability.

WorkGraph, Factory and the customer harness remain the governed source of context, rules, permissions, data and actions. The interface can change. The company's context, rules and accountability do not.

Motion explains causality — then stops.

The system never moves simply to announce that a page loaded. Every pass resolves, holds or returns control to the reader.

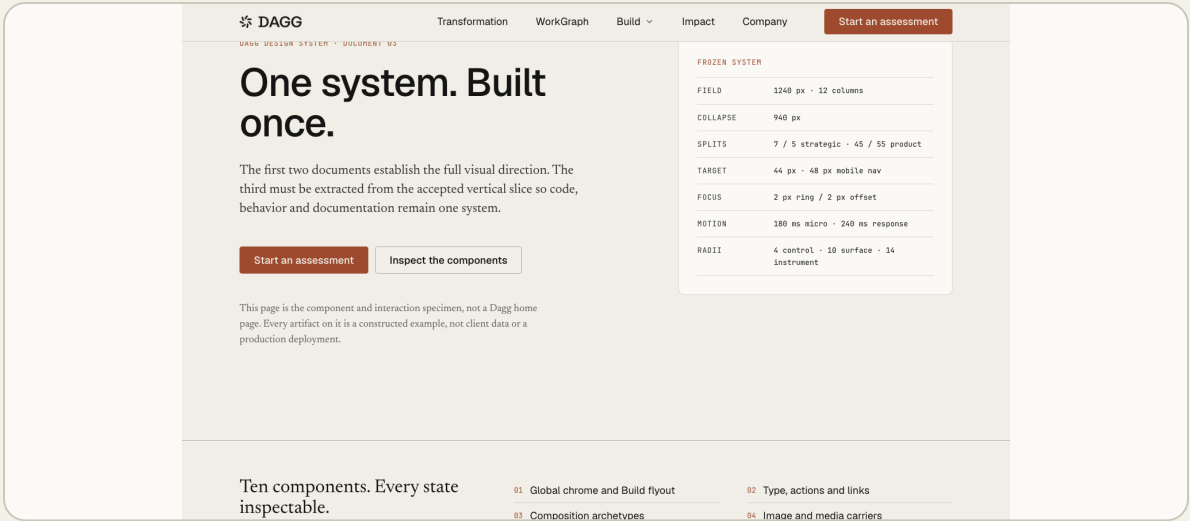

Micro response	120–180 ms	hover, focus and selected state
State change	220–300 ms	continuum, source and surface selection
Machine Signal	0.8–1.2 s	one coarse-to-resolved causal change
Factory pass	6–8 s max	pause, replay, judgment and verification holds
Reduced motion	immediate	same end state without interpolation

Six widths. Three interaction modes.

Desktop 1440 / 1280 full navigation · pointer · keyboard	iPad Pro landscape 1366 × 1024 bounded flyout · pointer + touch
iPad Air landscape 1180 × 820 editorial grid · pointer + touch	iPad landscape 1024 × 768 boundary-aware composition
iPad Pro portrait 1024 × 1366 touch-first disclosure	iPad Air portrait 820 × 1180 recomposed editorial grid
iPad portrait 768 × 1024 never stretched mobile	Mobile 390 / 360 / 320 full-canvas navigation

Meaning survives different capabilities.

Keyboard, touch, reduced motion and no JavaScript preserve the same story, routes and accountable end state.

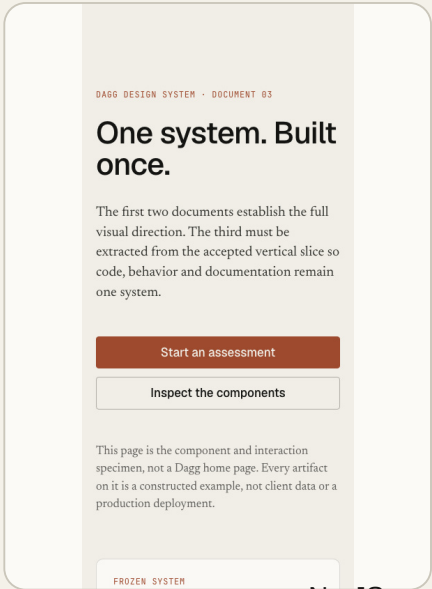

Visible focus and logical tab order

Hidden states are never focusable

Reduced motion resolves to the same end state

AA text contrast, 200% zoom and minimum targets

NO-JS TRUTH

Core content is readable. Real destinations remain available. Inert enhanced controls disappear.

The fallback is a complete reading path, not a warning screen.

No-JS exposes core content and real destinations

A, B and C share the parts — not the rhythm.

The system remains recognizable while each direction gives Christian a real choice about how Dagg enters the market.

COMPONENT	A · STRATEGIC	B · PRODUCT	C · OPERATIONAL
Hero	bounded thesis	mechanism forward	consequence forward
Decision	editorial continuum	interactive continuum	control-led continuum
WorkGraph	context + judgment	inspectable record	owner + boundary
Factory	proof after strategy	primary product moment	governed execution
Impact	named consequence	state change + evidence	truth + provenance

Selection criterion: the strongest coherent narrative, not the most effects.

Functional substrate passed. Brand restraint revised.

The 40 existing checks remain valid. This revision adds the peer-backed icon budget, adaptive-intelligence rules and repaired rendering.

40 / 40

FUNCTIONAL CHECKS RETAINED

DESKTOP · TABLET · MOBILE

KEYBOARD · TOUCH · NO-JS · REDUCED MOTION

REVISION CLOSES

■ Icon overreach

Public-site usage is explicitly sparse; the larger set remains an internal resource.

■ Adaptive behavior

Navigation and instruments change meaningful state, not merely animate.

■ Broken documentation

Factory, WorkGraph and surface specimens are fully contained and legible.

■ Shared authority

The exact PDF and revision brief are pinned for Claude before A/B/C synthesis.

NEXT GATE

Three complete, genuinely different and equally verified Home vertical slices: A1, B1 and C1.
