

SELECTED VISUAL SYSTEM

Intelligence becomes operational.

A unified image and motion language for Dagg: warm human judgment as the world, inspectable operational evidence as the proof, and machine-speed resolution as a restrained transition.

DECISION FIELD / OPERATIONAL EVIDENCE / MACHINE SIGNAL

ONE WORLD. TWO SUPPORTING MODES.

The mix is governed, not blended.

The three explorations do not become three competing visual identities. Decision Field establishes Dagg's world. Operational Evidence carries product and proof. Machine Signal contributes a motion behavior only when speed or resolution is the meaning.

70%

DECISION FIELD

Site world, strategy, hero and human judgment.

25%

OPERATIONAL EVIDENCE

Contained product, governance and proof surfaces.

5%

MACHINE SIGNAL

Resolution and acceleration in motion. Never a page world.

HARD RULE

One section never uses all three. The story chooses the mode before the image.

A

PRIMARY VISUAL LANGUAGE

The Decision Field

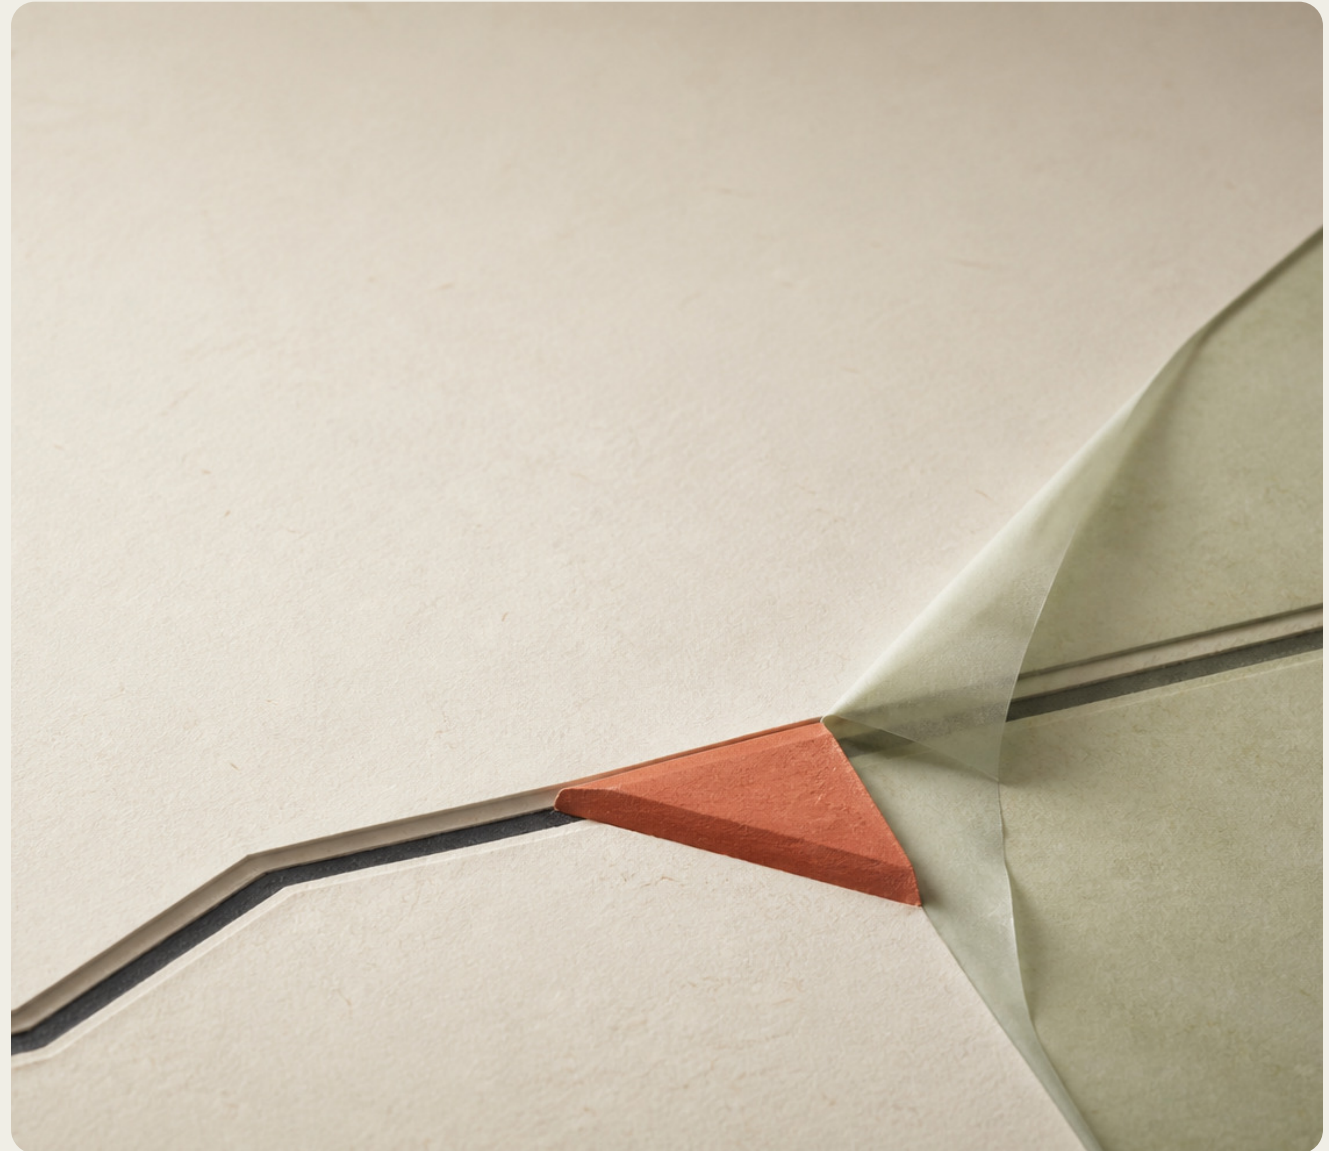

Company context begins as imperfect evidence. Human judgment changes its course. Governance gives it a boundary. Engineering resolves it into a precise operating system.

WHY IT IS DAGG

It can hold strategy and execution in the same frame without becoming a diagram. The material imperfection feels human; the resolved ink feels exact. Coral is judgment. Sage is control.

TACTILE / EDITORIAL / CAUSAL / CALM

One material world. Different page jobs.

WORKGRAPH

Evidence joins until the operational whole becomes legible.

DECISION

One coral intervention changes which path may continue.

FACTORY

Imperfect material resolves into a repeatable build system.

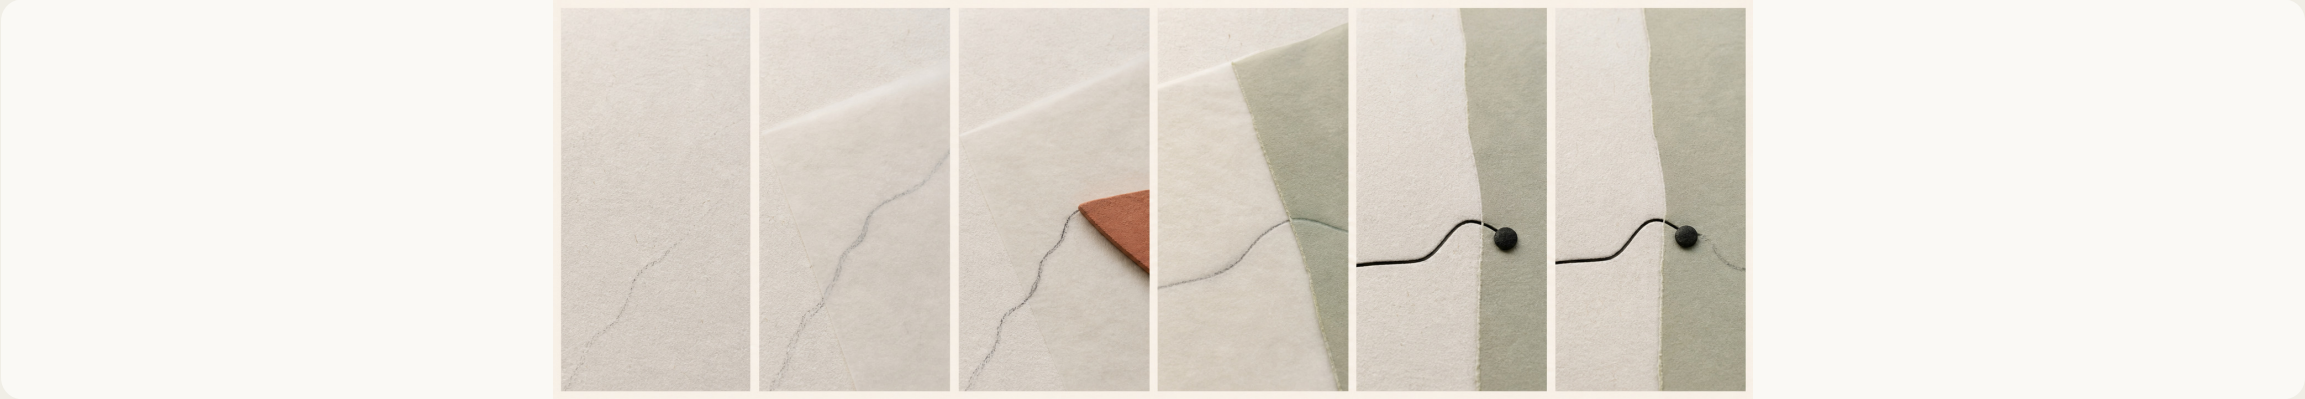

GOVERNANCE

A reversible decision meets a stable, visible boundary.

Movement reveals causality.

No ambient spectacle. The image changes because the work changes.

01

Trace

Hidden work emerges.

02

Align

Context becomes legible.

03

Decide

Coral changes the path.

04

Bound

Sage defines permission.

05

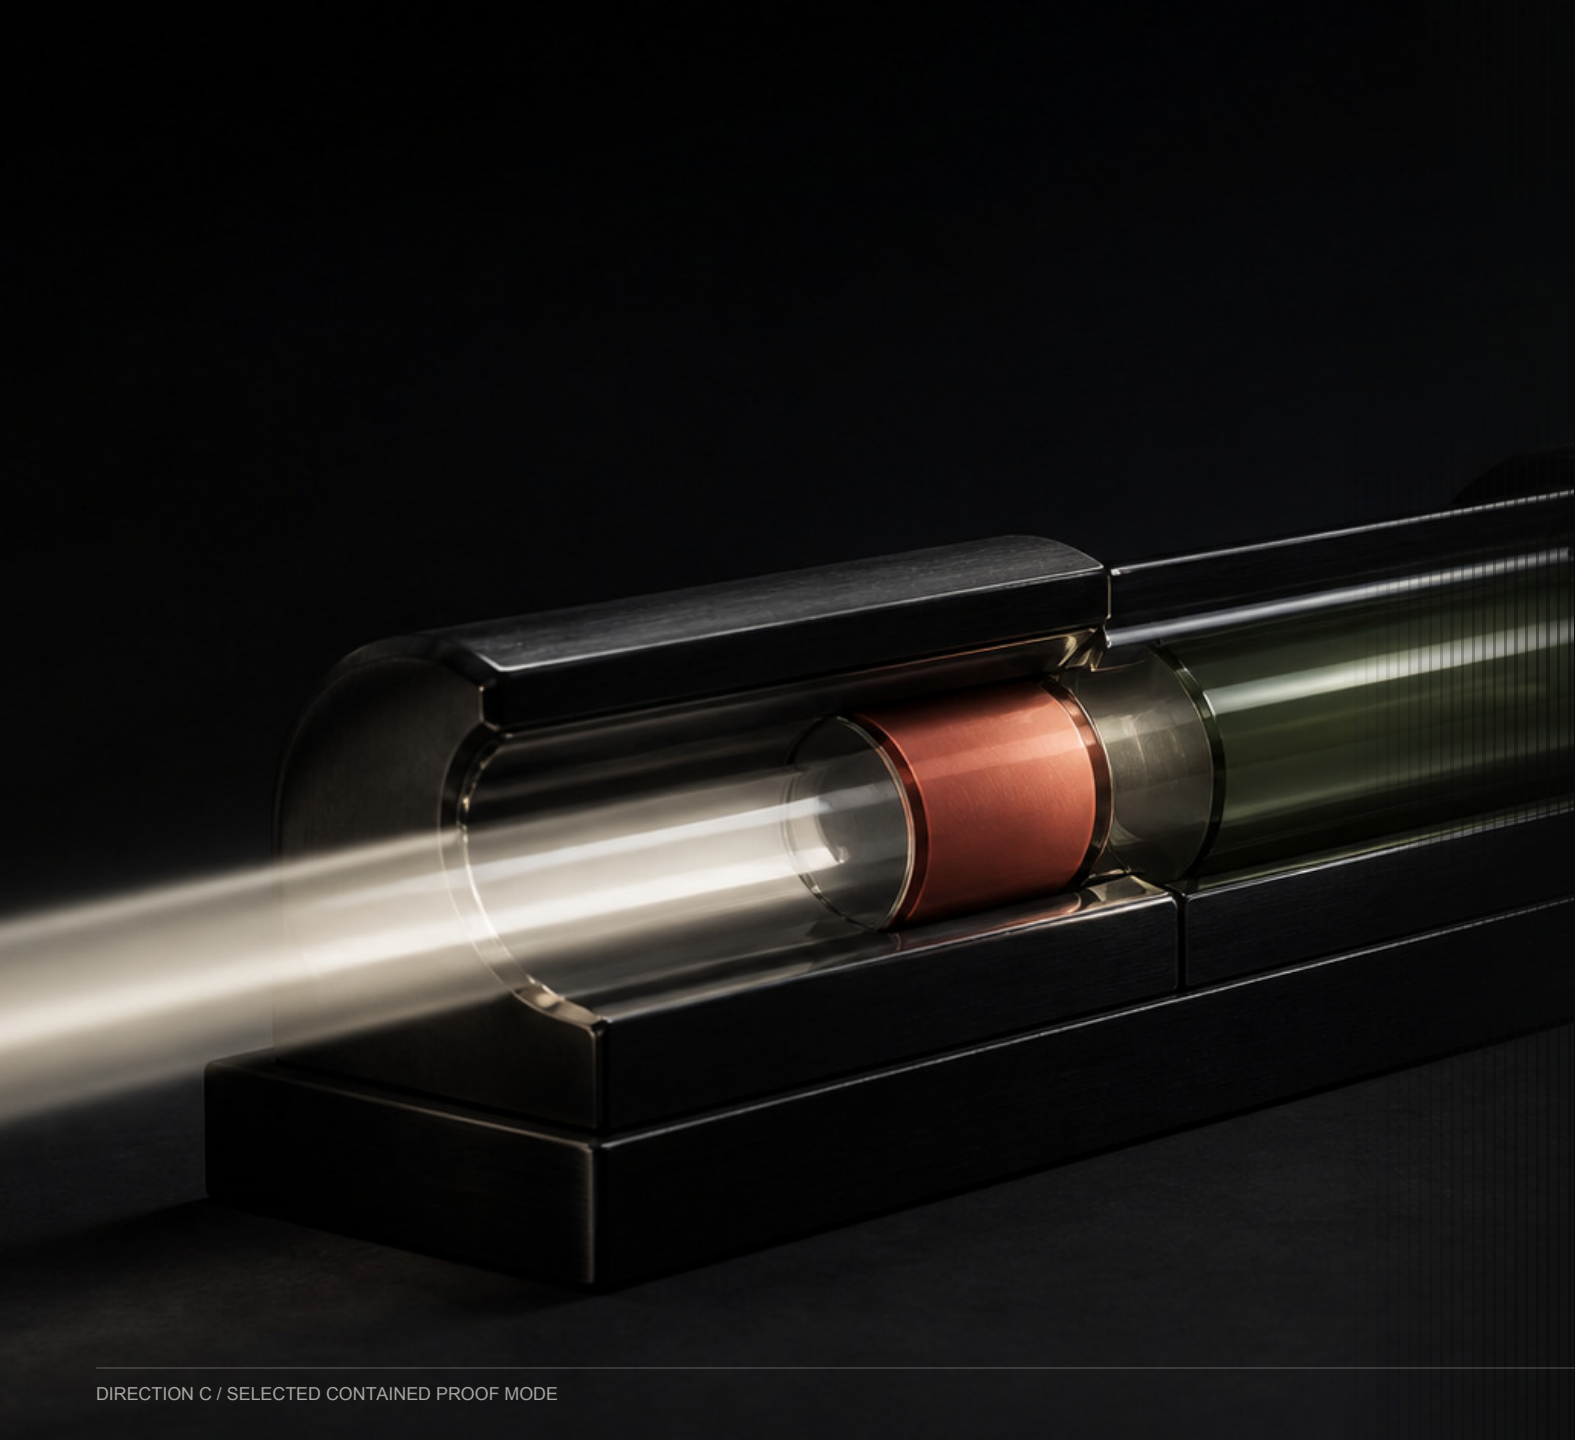

Resolve

Ink becomes operational.

06

Return

The next cycle inherits context.

C

CONTAINED PROOF LANGUAGE

Operational Evidence

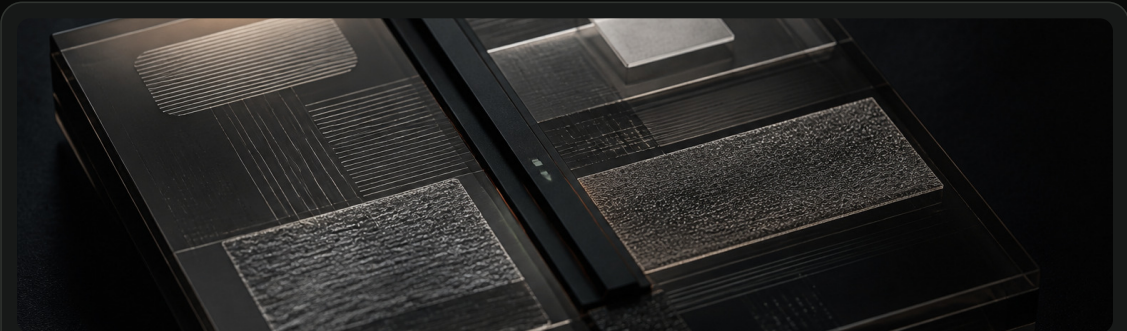

Physical, inspectable states for WorkGraph, Factory, governance and Trust. The objects are abstract but materially credible. Each frame shows one operational event.

BOUNDARY

This mode never pretends to be a live interface, customer result or deployed system. It supports evidence; it does not manufacture it.

Proof is a state change, not a dashboard.

WORKGRAPH
Evidence registers against one retained operating record.

DECISION
Judgment interrupts what the machine would otherwise do.

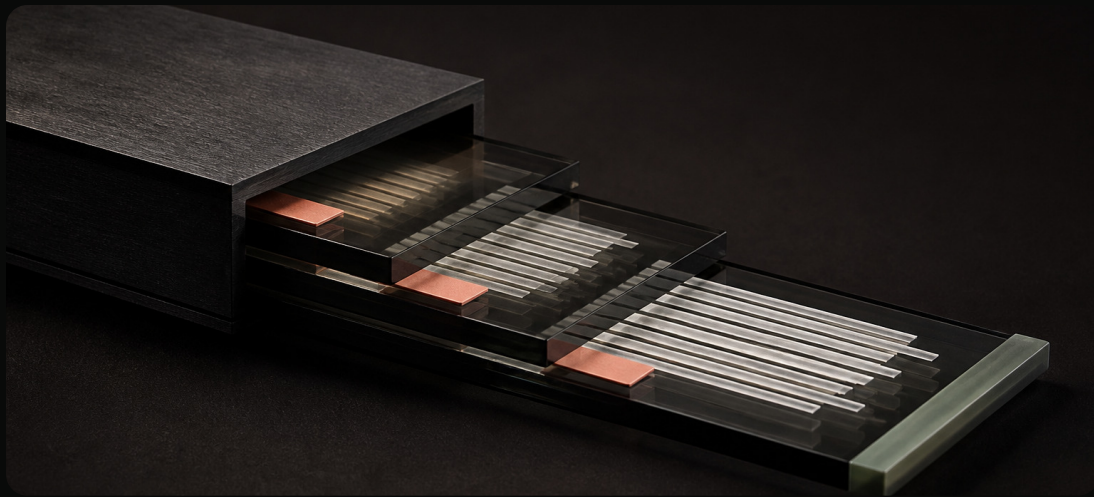

FACTORY
Build layers align around observable constraints and release criteria.

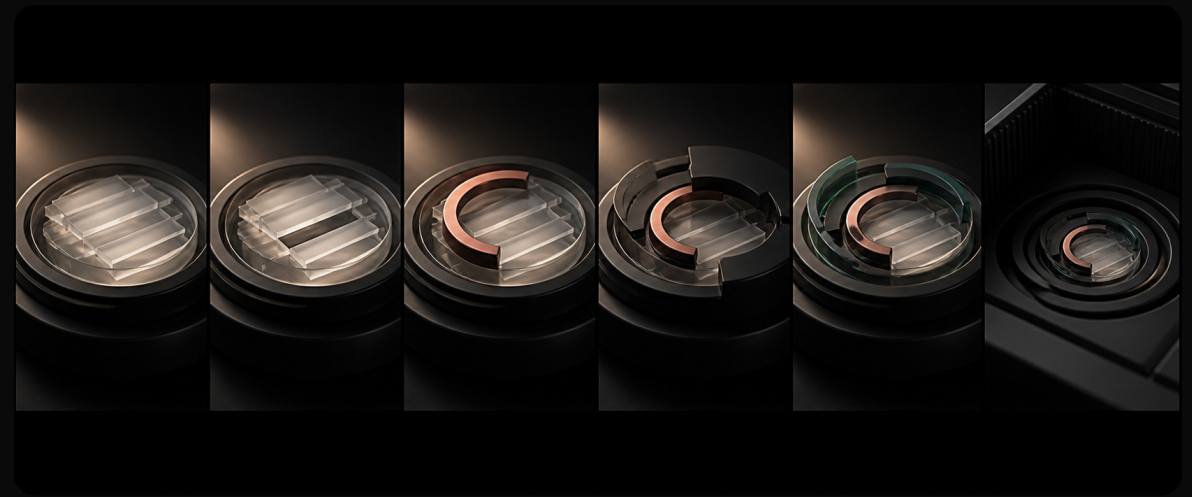

GOVERNANCE
Permitted action crosses; the exception remains held.

Finite, inspectable, accountable.

COMPOUNDING

Retained context makes the next operational record clearer. No unsupported multiplier is implied.

MOTION CONTRACT

Evidence registers -> mismatch appears -> judgment engages -> build aligns -> boundary verifies -> corrected evidence returns.

TIMING

One 6-8 second pass. Hold at judgment and verification. Then stop.

B

MOTION VOCABULARY ONLY

Machine Signal

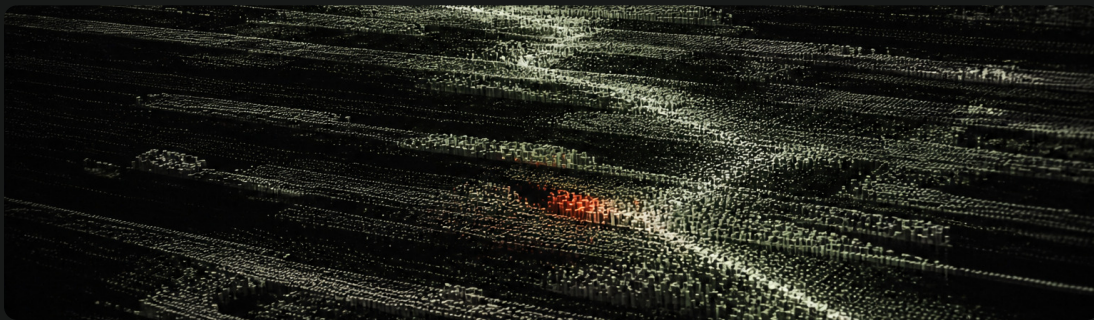

A controlled shift from coarse signal to high legibility. It communicates machine speed, resolution and inherited learning without becoming Dagg's visual world.

PERMITTED USE

A short scan, resolution snap, provenance echo or state transition inside an otherwise A or C section. Never a full page, ambient background or second hero language.

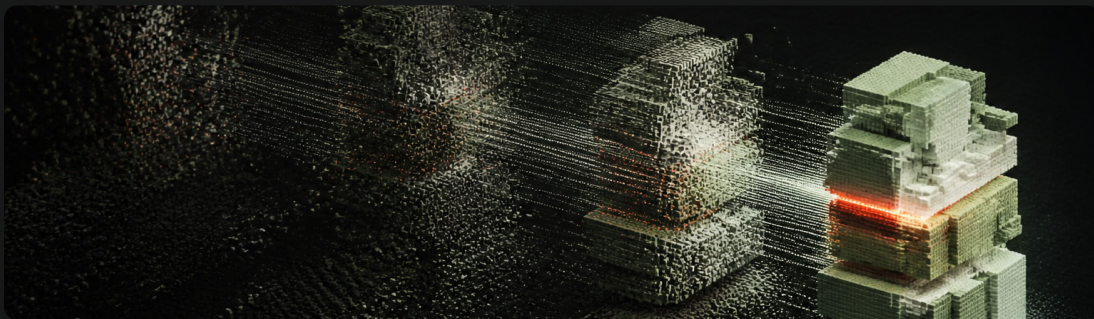

Resolution is the narrative.

RESOLVE

Context strata align into a traversable record.

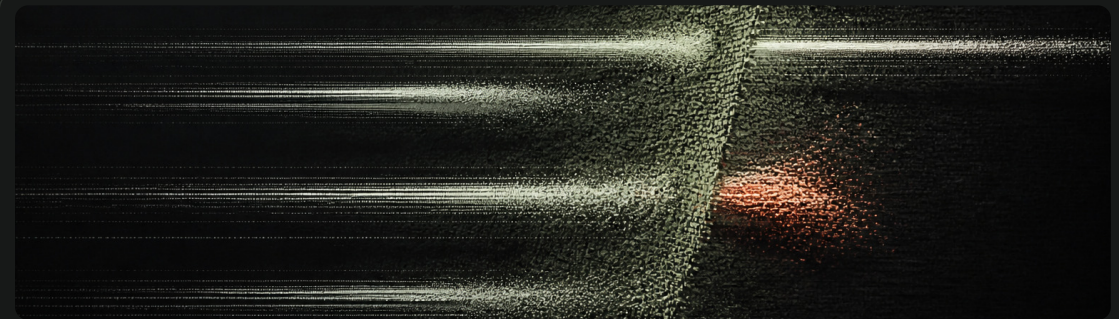

ASSEMBLE

Coarse states become one bounded operational object.

INTERRUPT

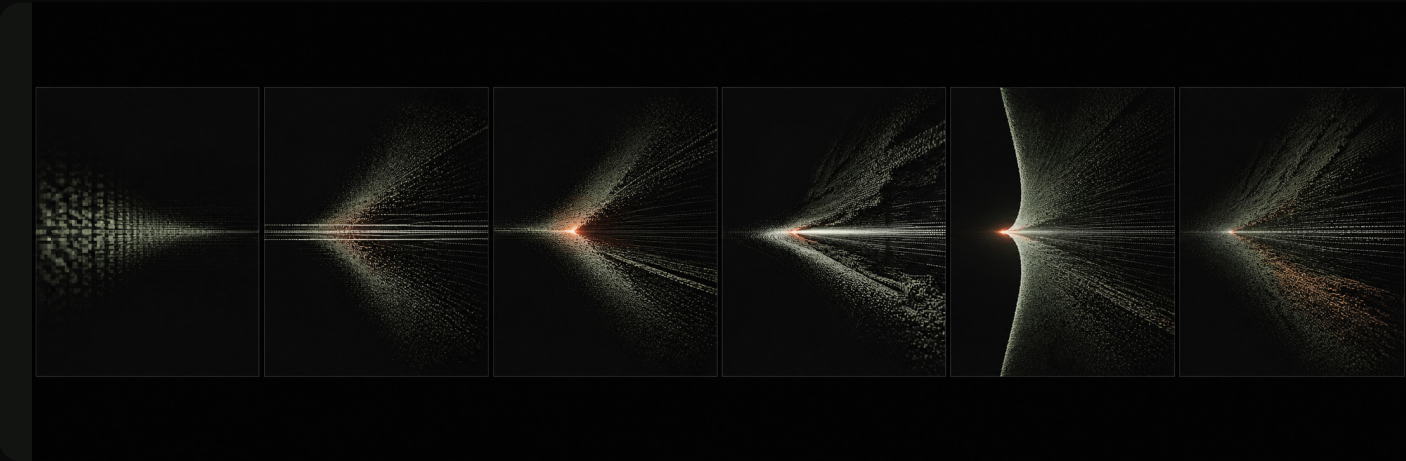

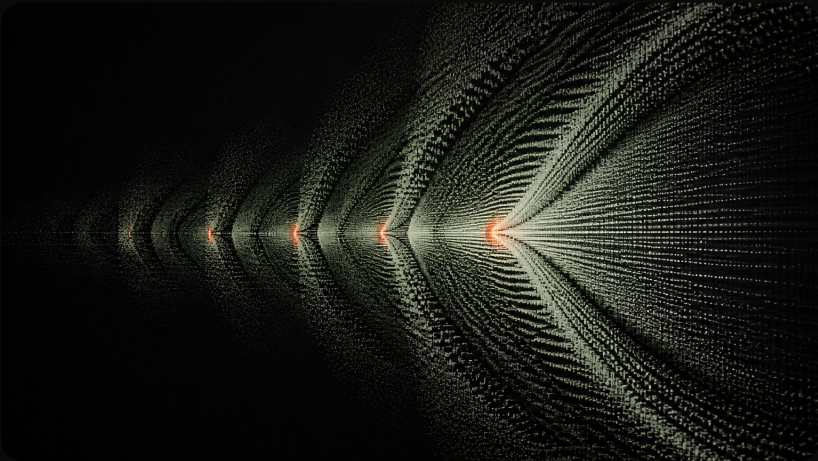

Coral changes the phase; unused paths lose resolution.

VERIFY

Permitted signal crosses while the exception remains held.

Fast where the meaning is speed.

ALLOWED

Short scan passes, resolution snaps, provenance echoes and a final still that holds.

REQUIRED

A visible before and after state. Coral appears once. Sage arrives only with control.

FORBIDDEN

Cyberpunk glow, endless particles, tunnel motion, circuit-board diagrams or fake UI.

SITE BEHAVIOR

Discover the system by changing it.

Interaction must reveal mechanism, consequence or constraint. It is never a decorative carousel.

TRANSFORMATION

Map a flow

Expose where judgment, removal or redesign changes the operating model.

WORKGRAPH

Trace context

Hover or select a source and see how evidence enters the retained record.

HARNESS

Route and govern

Change a model or permission and see what the boundary allows or holds.

BUILD

Follow the factory

Move from requirements to product decision, architecture and verified release.

IMPACT

Inspect proof

Reveal named evidence, its provenance and the condition that would change the claim.

V1 RULE

One causal proof per mechanism. The user discovers meaning, not hidden marketing copy.

WHERE EACH LANGUAGE LIVES

Page mode follows the story job.

SECTION	PRIMARY MODE	SUPPORT	WHAT THE VISUAL MUST PROVE
Home hero	Decision Field	Machine Signal	Judgment redirects a system toward an operational state.
Transformation	Decision Field	None	Strategy changes work, not just tooling.
WorkGraph	Decision Field	Operational Evidence	Context becomes a retained, traversable company record.
Build	Operational Evidence	Machine Signal	Requirements resolve into governed, verified software and agents.
Impact	Operational Evidence	Decision Field	A named result has provenance, consequence and a truth boundary.
Company	Decision Field	None	Dagg's ambition and judgment are felt without a headcount story.

SELECTED EXECUTION

A world. An instrument. A consequence.

The first vertical slice must prove the complete system at production quality before the rest of the site expands.

01

World

Decision Field hero, warm paper and a single human intervention.

02

Instrument

Contained WorkGraph or Factory proof in Operational Evidence mode.

03

Consequence

A finite Machine Signal transition that makes the state change legible.

QUALITY GATE: IF IT LOOKS LIKE SLIDES, A CIRCUIT BOARD OR GENERIC AI, IT DOES NOT SHIP.
